

SANUVAIR 500-GX™

Ceiling tile UV air sterilization system

The SANUVAIR 500-GX™ Recessed Ceiling Mount UV Air Sterilizer is an innovative design for office, school, hospital and institutional facilities. The SANUVAIR 500-GX™ space saving 24"x 24" self-contained design, easily installs in the opening of a suspended ceiling.

The SANUVAIR 500-GX™ uses the Sanuvox process to slow the air over the UV Lamp, intensify the UV energy with an Aluminum Reflecting Housing, and mix the purified air around the UV Lamp. The SANUVAIR 500-GX™ will effectively destroy chemical and biological contaminants that effect the work place environment. Extremely quiet and the ability to purify an area of up to 500 square feet (per unit), makes this purifier the ideal solution for the problems associated with Sick Building Syndrome.

SANUVAIR 500-GX™ FEATURES
